Raketu or Skype comparison Rates and Calling Plans

February 5th, 2009

Hi,

Skype has a big market in this voip industry, and every other voip providers tries to provide better deals than skype in order to get the skype user back to them.

I must say a lot of voip providers have succeeded in this and have time to time provided much better deals than skype. Recently, [Raketu](#) (a voip provider offering Pc to Phone, click to call service) sent a update (email) comparing their service with Skype.

Raketu has compared its rates and calling plans to skype. And the conclusion was quite clear, **Raketu rates are much, much cheaper than Skype's.** You can save a lot of money if you switch to Raketu from skype.

Check the comparison below.

1) Calling to UK mobile: Raketu call saves you \$1 over Skype on a 10 minute call

Skype: 29.1 cents per minute + 4.5 cent connection fee

Raketu: 18.9 cents per minute, no connection fee

- 10 minute call to UK mobile:

- Skype: $\$2.91 + \$0.45 = \$2.955$

- Raketu: $\$1.89 = \1.89

Imagine saving over \$6 on a single 60 minute call!

2) Calling to the US: Raketu call saves you \$.185 or 65% over Skype on a 10 minute call

Skype: 2.4 cents per minute + 4.5 cent connection fee

Raketu: 1.0 cents per minute, no connection fee

- 10 minute call to the US:

- Skype: $\$.24 + \$0.45 = \$.285$

- Raketu: $\$.10 = \$.10$

Imagine saving over \$1 on a single 60 minute call!

Raketu also has [unlimited calling plans](#), that allow you to call to locations in 46 countries around the world (Raketu free zones):

- **\$2.95 for 1000 minutes calling**

- **\$4.45 for 1500 minutes calling**

- **\$9.95 for unlimited calling**

Apart from these unlimited free calling plans, few months back [Raketu](#) launched click to call me feature. I guess as they say, it has been very successgul with people putting the click to call me button in their email signature, forums, etc.

Raketu has a update on Click to call me service.

The current click-to-callme allows computer-to-phone calls from a single click on any browser on any computer - without a download. Well, [Raketu](#) has just added the ability for **phone-to-phone calls** also! This allows people to enter their phone number, click the callme button, and their phone will ring and be connected to your phone - all anonymously. So, if someone does not have a headset, they can still use click-to-callme feature. Great..!!
