Raketu Launches Web-Based VoIP Telephony Service

Sweden-based Raketu, an Internet communications, information, and entertainment company, announced this week that they have launched RakWeb, which is a new web-based VoIP service. Because of the unique set up, customers will not have to download any software to use it. They just visit Raketu.com, enter their telephone number, enter the number they're calling, and they're then connected at a reduced rate, as compared to traditional calling rates. With this new offering, Raketu will be giving Skype and Jajah a run for their money.

"Raketu's mission is to make Internet telephony both fun and accessible to everyone," said Greg Parker, CEO of Raketu Communications. "Whether you have dial-up Internet access or broadband, whether you feel more comfortable downloading and interfacing with an interactive desktop application, or you only want to access your Internet telephony services from a Web-browser, you can do it with Raketu."

Features and benefits include:

- **Totally Free:** Raketu to Raketu calling anywhere in the world, requires both users running Raketu's LaunchPad desktop application.
- **Free or Lowest Rates:** RakOut Dial-out VoIP service, requires one user on Raketu, the other on landline/mobile phone. RakOut offers free calling to locations in over 40 countries around the world, and the lowest published rates on all other calls.
- **Low Rates:** RakWeb calling requires no software downloads with both users on traditional mobile or landline phones. This service can be used by anyone who has a web browser and access to Raketu.com - including Windows, Linux, Mac OSX.

It's been a while now I am using Raketu to make calls both for internationally and local calls. And now tried RakWeb services for calling and sending SMS, which is like cherry on the cake... Low rates, better sound quality, Mobile technology what else one can ask. Its great, Not only this Raketu comes along with loads of entertaining features, check yourself www.raketu.com

Raketu ROCKS!!!!!!!!!!!!!!

Its a best ever software I have used so far...

Have been using Skype for 2yrs now but Raketu made me throw Skype in bin!!!
