Today is a great day for users of BlackBerry devices. Specifically for those who have a model with WiFi connectivity, as the Curve or Pearl 2. Because Raketu has brought to market its agenda Raketu BlackBerry Application, which allows those with the application installed on your computer RIM, known among them for free, even international. Like Skype also allows us to make calls to other phones with their special rates which are composed of bonds in a series of minutes.

We also can send text messages and e-mails from the same application.

The application is a web that is, we must enter it with the browser and not descargándonos no application to the phone. For the cost of data traffic we should not worry because remember that is used via WiFi, because with the GPRS of the BlackBerry would be impracticable.
