## Yes, It is Possible to Call via SMS!

Filed in archive [Mobile Internet](#) , [Mobile Technologies](#) , [VoIP](#) by [leo](#) on November 15, 2007

Yeah, I know the title is quite confusing but it is what it is - a new technology enabling mobile users to make VoIP calls just by sending a simple text message.

[Raketu](#), leading edge peer-to-peer Internet protocol applications developer, has created an SMS-Text Driven VoIP Service called [RakSMS calling](#), which enables mobile device users to make phone-to-phone voice over IP (VoIP) Internet calls with no computer or Internet connection required.

Unlike most mobile VoIP services available today, it does not need a GPRS connection to initiate a call. It means even a simple mobile phone can use this service. Here's an example to make matters clear:

*A mobile phone user in the UK wants to call a friend in New York also on a mobile phone. The user in the UK sends a text message from their mobile phone to Raketu's UK local number with the appropriate calling information in the message and Raketu connects the two phones. The Raketu rate for the call will be the regular RakWeb calling rate, or \$0.115 per minute.*

**Requirements:** You must have Raketu account with credits. You can load your account with \$9.95, \$24.95 or \$49.95.

**Savings:** Raketu claims mobile users can save more than 35% compared to Jajah's rate for the same call.
