

## How to adjust Raketu in Windows Vista and give permissions.

Following these steps should help you run Raketu successfully on Vista. Once you install the Raketu software successfully, you need to follow the following steps:

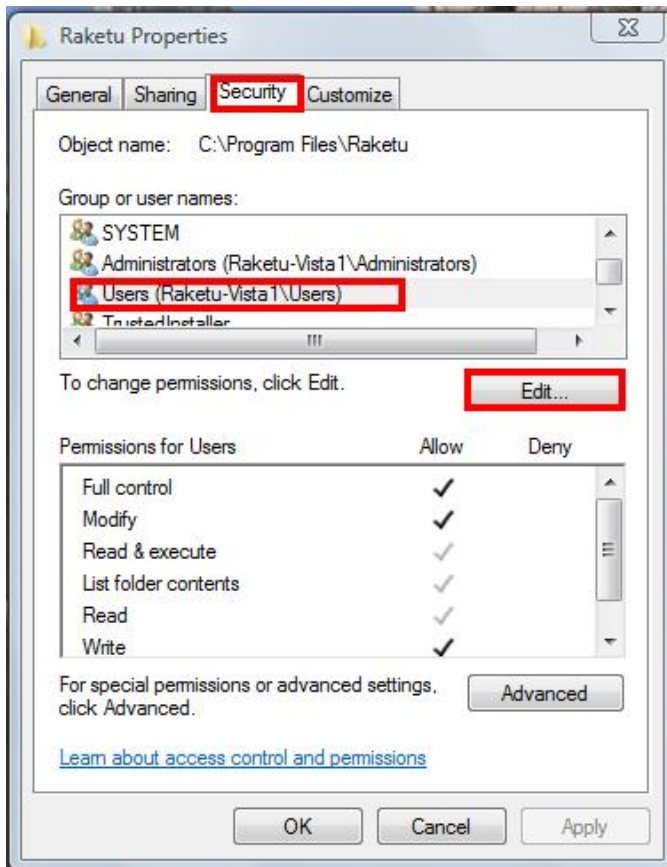

1. Exit the Raketu software „File->Exit“. Double click on my computer icon and go to C: Program Files->

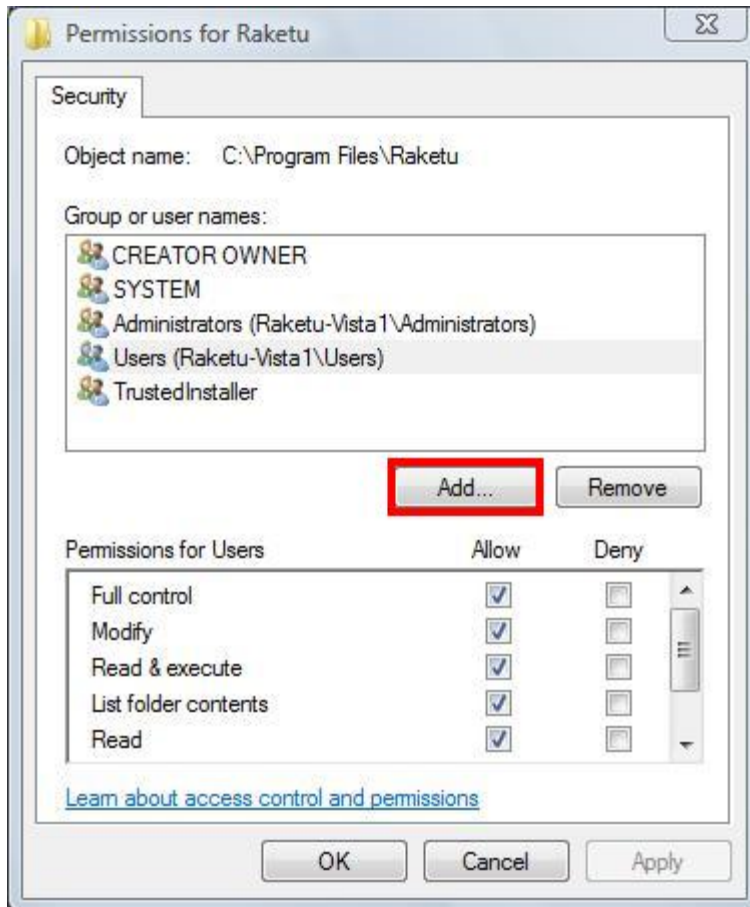

2. You will see Raketu folder here, right click in Raketu folder, and left click on „Properties“.

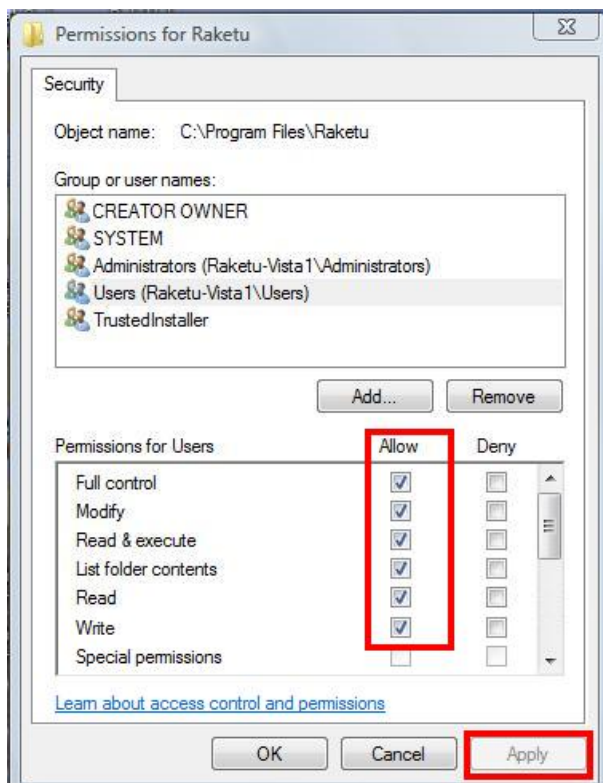

3. Click on the “Security” tab; select your computer user name and click “Edit”.

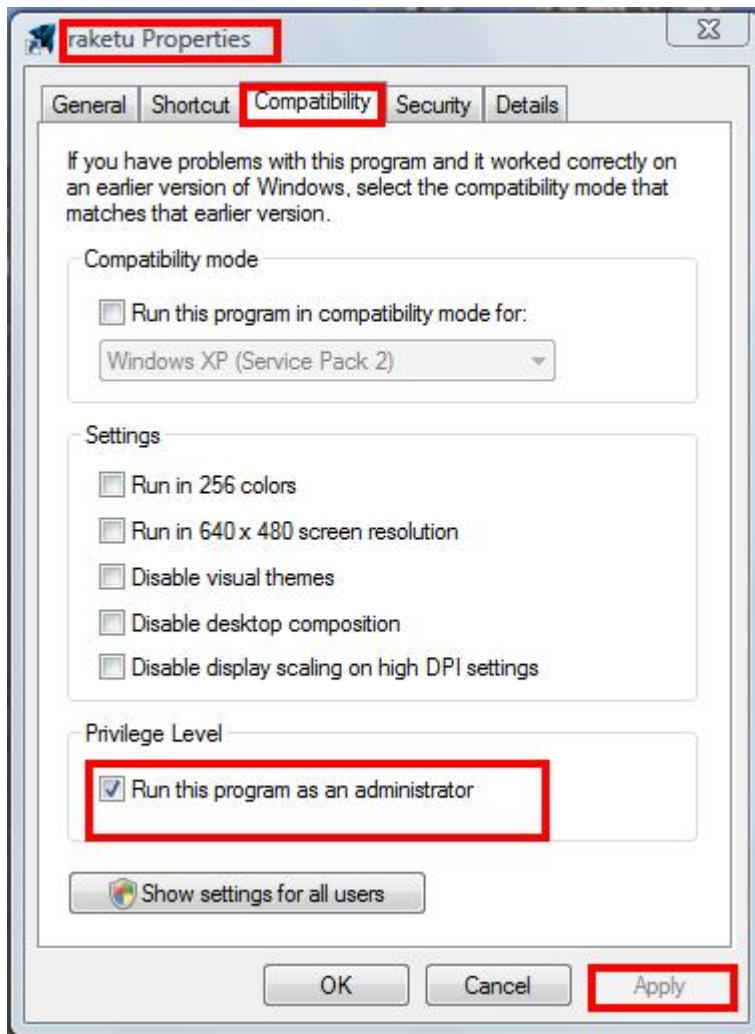

If you do not see your user name you need to add it by clicking on „Edit“ than “Add”.

4. Once you click on “Edit” select you user name once again and click on Full access(permission) [Make sure you have the write and modify right]

5. Click „Apply“ then OK.
6. Then Right click on your Raketu Icon on the desktop then click “Properties” and then click on “Compatibility” tab then check the option “Run this program as an administrator” and then click on “Apply” and “Ok”.

After you finish step #6 you will see a shield added to the Raketu icon on your desktop, see the picture below:
